| <i>List of Figures</i>   | page xi |
| <i>List of Tables</i>  | xiii    |
| <i>List of Contributors</i>  | xiv     |
| <i>Preface</i>   | xvii    |
| <b>1 Introduction</b>  | 1       |
| 1.1 Hard Times for Dr Pangloss   | 1       |
| 1.2 The Complexity View  | 3       |
| 1.3 Heterogeneity in a Neoclassical World                                    | 4       |
| 1.4 Agent-Based Models (ABMs)  | 6       |
| 1.5 Plan of the Book   | 8       |
| <b>2 Agent-Based Computational Economics: What, Why, When</b>                | 10      |
| 2.1 Introduction   | 10      |
| 2.2 Features of Agent-Based Models   | 11      |
| 2.2.1 Scope of Agent-Based Models  | 12      |
| 2.2.2 The Whole and Its Parts  | 13      |
| 2.2.3 The Dual Problem of the Micro-Macro Relationship                       | 14      |
| 2.2.4 Adaptive vs. Rational Expectations                                     | 15      |
| 2.2.5 Additional Features of Agent-Based Models                              | 17      |
| 2.3 The Development of ACE   | 20      |
| 2.3.1 Evolutionary Roots   | 20      |
| 2.3.2 The Santa Fe Perspective: The Economy as an<br>Evolving Complex System | 21      |
| 2.3.3 AB Models as Dynamic Microsimulations                                  | 24      |
| 2.3.4 The Experimental Machine   | 25      |
| 2.4 Why Agents   | 27      |

|          |   |           |
|----------|---|-----------|
| 2.5      | An <i>Ante Litteram</i> Agent-Based Model: Thomas Schelling's Segregation Model | 29        |
| 2.6      | Conclusions   | 32        |
| <b>3</b> | <b>Agent-Based Models as Recursive Systems</b>                                  | <b>33</b> |
| 3.1      | Introduction  | 33        |
| 3.2      | Discrete-Event vs. Continuous Simulations and the Management of Time            | 33        |
| 3.3      | The Structure of an AB Model  | 37        |
| 3.4      | Obtaining Results in AB Models  | 41        |
| <b>4</b> | <b>Rationality, Behavior, and Expectations</b>                                  | <b>43</b> |
| 4.1      | Introduction  | 43        |
| 4.2      | Certainty   | 44        |
| 4.3      | Uncertainty   | 45        |
| 4.3.1    | Risk Neutrality   | 46        |
| 4.3.2    | Risk Aversion   | 47        |
| 4.3.3    | Optimal Choice in a Multi-Period Setting  | 50        |
| 4.4      | Adaptation in Expectation Formation   | 55        |
| 4.5      | Riding at Full Gallop through the History of Macroeconomics                     | 56        |
| 4.5.1    | The Neoclassical-Keynesian Synthesis  | 57        |
| 4.5.2    | Expectations Enter the Scene  | 58        |
| 4.5.3    | Adaptive Expectations   | 59        |
| 4.5.4    | Rational Expectations   | 62        |
| 4.5.5    | The New Neoclassical Synthesis  | 68        |
| 4.6      | The Limits of Rational Expectations   | 71        |
| 4.7      | Heterogeneous Expectations: A Very Simple Introduction                          | 72        |
| 4.7.1    | Heterogeneous-Biased Expectations   | 72        |
| 4.7.2    | A Convenient Special Case: Two Types  | 74        |
| 4.7.3    | Heterogeneous Adaptive Expectations   | 76        |
| 4.8      | Heterogeneous Expectations in ABMs  | 76        |
| 4.9      | Conclusions   | 79        |
| <b>5</b> | <b>Agents' Behavior and Learning</b>  | <b>81</b> |
| 5.1      | Introduction  | 81        |
| 5.2      | Full and Bounded Rationality  | 82        |
| 5.2.1    | Empirical Microfoundations of Individual Behavior                               | 85        |
| 5.2.2    | Agents' Behavior and Heuristics   | 90        |

|          |  |     |
|----------|--|-----|
| 5.3      | Learning   | 93  |
| 5.3.1    | Individual Learning 1: Statistical Learning                              | 95  |
| 5.3.2    | Individual Learning 2: Fitness Learning                                  | 97  |
| 5.3.3    | Social Learning  | 105 |
| 5.3.4    | Individual vs. Social Learning   | 107 |
| 5.4      | Conclusions  | 108 |
| <b>6</b> | <b>Interaction</b>   | 109 |
| 6.1      | Introduction   | 109 |
| 6.2      | Modeling Interactions  | 110 |
| 6.2.1    | Local Exogenous Interaction  | 114 |
| 6.2.2    | Endogenous Interaction   | 118 |
| 6.3      | Networks: Basic Concepts and Properties                                  | 125 |
| 6.4      | Static and Dynamic Networks  | 133 |
| 6.4.1    | Static Networks  | 133 |
| 6.4.2    | Dynamic Networks   | 137 |
| 6.5      | Conclusions  | 141 |
| <b>7</b> | <b>The Agent-Based Experiment</b>  | 143 |
| 7.1      | Introduction   | 143 |
| 7.2      | Long-Run and Transient Equilibria  | 144 |
| 7.2.1    | Definitions  | 144 |
| 7.2.2    | Uniqueness and Multiplicity of Equilibria                                | 146 |
| 7.2.3    | Implications of Stationarity and Ergodicity                              | 150 |
| 7.3      | Sensitivity Analysis of Model Output                                     | 151 |
| 7.3.1    | Settings for SA  | 152 |
| 7.3.2    | Strategies for SA  | 152 |
| 7.3.3    | SA and AB Modelling: Some Applications                                   | 156 |
| 7.3.4    | A Simple Example: SA on a Bass Diffusion Model<br>with Local Interaction | 156 |
| 7.4      | Conclusions  | 161 |
| <b>8</b> | <b>Empirical Validation of Agent-Based Models</b>                        | 163 |
| 8.1      | Introduction   | 163 |
| 8.2      | The Methodological Basis of Empirical Validation                         | 165 |
| 8.2.1    | Tractability vs. Accuracy  | 166 |
| 8.2.2    | Instrumentalism vs. Realism  | 167 |
| 8.2.3    | Pluralism vs. Apriorism  | 167 |
| 8.2.4    | The Identification Problem   | 168 |

|           |  |            |
|-----------|--|------------|
| 8.3       | Input Validation of Agent-Based Models             | 169        |
| 8.4       | Output Validation of Agent-Based Models            | 172        |
| 8.5       | Qualitative Output Validation Techniques           | 176        |
| 8.5.1     | The Indirect Calibration Approach                  | 178        |
| 8.5.2     | The History-Friendly Approach                      | 180        |
| <b>9</b>  | <b>Estimation of Agent-Based Models</b>            | <b>183</b> |
| 9.1       | Introduction                                       | 183        |
| 9.2       | Taking the Model to the Data                       | 185        |
| 9.2.1     | Comparing Apples with Apples                       | 185        |
| 9.2.2     | Preliminary Tests                                  | 187        |
| 9.2.3     | Simulation-Based Estimation                        | 189        |
| 9.2.4     | Consistency  | 191        |
| 9.2.5     | Calibration vs. Estimation                         | 192        |
| 9.3       | Simulated Minimum Distance                         | 195        |
| 9.3.1     | The Method of Simulated Moments                    | 195        |
| 9.3.2     | Ergodicity and an Application to a Simple AB Model | 203        |
| 9.4       | Bayesian Estimation                                | 210        |
| 9.4.1     | Estimating the Likelihood                          | 211        |
| 9.4.2     | Sampling the Posterior Distribution                | 214        |
| 9.4.3     | Approximate Bayesian Computation                   | 216        |
| 9.4.4     | ABC Estimation of the Segregation Model            | 219        |
| 9.5       | Conclusions  | 221        |
| <b>10</b> | <b>Epilogue</b>                                    | <b>222</b> |
|           | <i>Bibliography</i>                                | 224        |
|           | <i>Index</i>                                       | 240        |
