Preface	xiv

Part I: The Foundations 1

1 Overview	2
1.1 Purpose	4
1.2 The general framework	4
1.3 Recognizing randomness	8
1.4 Lies, damned lies, and statistics	9
1.5 Testing for randomness	10
1.6 Research design and key concepts	14
1.7 Paradoxes	19
1.8 Chapter summary	20
1.9 Recommended readings	20

2 Descriptive Statistics 22

2.1 Purpose	24
2.2 Introduction	24
2.3 Numerical scales	25
2.4 Histograms	31
2.5 Measures of central tendency: Measurement data	41
2.6 Measures of spread: Measurement data	50
2.7 What creates variance?	61
2.8 Measures of central tendency: Categorical data	66
2.9 Measures of spread: Categorical data	67
2.10 Unbiased estimators	69
2.11 Practical SPSS summary	70
2.12 Chapter summary	74
2.13 Recommended readings	74
2.14 Chapter review questions	74

3 Probability	80
3.1 Purpose	82
3.2 Introduction	82
3.3 Approaches to probability	83
3.4 Frequency histograms and probability	86
3.5 The asymptotic trend	87
3.6 The terminology of probability	89
3.7 The laws of probability	94
3.8 Bayes' rule	99
3.9 Continuous variables and probability	102
3.10 The standard normal distribution	110
3.11 The standard normal distribution and probability	113
3.12 Using the z-tables	115
3.13 Chapter summary	120
3.14 Recommended readings	121
3.15 Chapter review questions	121
Part II: Basic Research Designs	125
4 Categorical Data and Hypothesis Testing	126
4.1 Purpose	128
4.2 Introduction	128
4.3 The binomial distribution	128
4.4 Hypothesis testing with the binomial distribution	136
4.5 Conducting the binomial test with SPSS	139
4.6 Null hypothesis testing	141
4.7 The χ^2 goodness-of-fit test	154
4.8 The χ^2 goodness-of-fit test with more than two categories	158
4.9 Conducting the χ^2 goodness-of-fit test with SPSS	159
4.10 Power and the χ^2 goodness-of-fit test	161
4.11 The G-test	163
4.12 Can a failure to reject indicate support for a model?	164
4.13 Chapter summary	165
4.14 Recommended readings	166
4.15 Chapter review questions	166
5 Testing for a Difference: Two Conditions	170
5.1 Purpose	172
5.2 Introduction	172
5.3 Building on the z-score	173
5.4 Testing a single sample	174
5.5 Independent-samples t-test	177

5.6	Independent-samples <i>t</i> -test example	180
5.7	Paired-samples <i>t</i> -test	189
5.8	Confidence limits and intervals	198
5.9	Randomization test and bootstrapping	201
5.10	Nonparametric tests	207
5.11	Chapter summary	215
5.12	Recommended readings	216
5.13	Chapter review questions	216
6	Observational Studies: Two Categorical Variables	220
6.1	Purpose	222
6.2	Introduction	222
6.3	χ^2 goodness-of-fit test reviewed	226
6.4	χ^2 test of independence	228
6.5	The ϕ coefficient	233
6.6	Necessary assumptions	235
6.7	χ^2 test of independence: SPSS example	238
6.8	Power, sample size, and the χ^2 test of independence	246
6.9	The third-variable problem	247
6.10	Multi-category nominal variables	253
6.11	Tests of independence with ordinal variables	258
6.12	Chapter summary	263
6.13	Recommended readings	263
6.14	Chapter review questions	264
7	Observational Studies: Two Measurement Variables	268
7.1	Purpose	270
7.2	Introduction	270
7.3	Tests of association for categorical data reviewed	272
7.4	The scatterplot	276
7.5	Covariance	280
7.6	The Pearson product moment correlation coefficient	285
7.7	Simple regression analysis	293
7.8	The assumptions necessary for valid correlation and regression coefficients	304
7.9	Chapter summary	314
7.10	Recommended readings	316
7.11	Chapter review questions	317
8	Testing for a Difference: Multiple Between-Subjects Conditions (ANOVA)	320
8.1	Purpose	322
8.2	Introduction	322

8.3	Reviewing the <i>t</i> -test and the χ^2 test of independence	326
8.4	The logic of ANOVA: Two unbiased estimates of σ^2	331
8.5	ANOVA and the <i>F</i> -test	338
8.6	Standardized effect sizes and the <i>F</i> -test	344
8.7	Using SPSS to run an ANOVA <i>F</i> -test: Between-subjects design	346
8.8	The third-variable problem: Analysis of covariance	348
8.9	Nonparametric alternatives	354
8.10	Chapter summary	357
8.11	Recommended readings	358
8.12	Chapter review questions	358
9	Testing for a Difference: Multiple Related Samples	362
9.1	Purpose	364
9.2	Introduction	365
9.3	Reviewing the between-subjects ANOVA and the <i>t</i> -test	368
9.4	The logic of the randomized block design	372
9.5	Running a randomized block design with SPSS	381
9.6	The logic of the repeated-measures design	388
9.7	Running a repeated-measures design with SPSS	397
9.8	Nonparametric alternatives	401
9.9	Chapter summary	405
9.10	Recommended readings	406
9.11	Chapter review questions	407
10	Testing for Specific Differences: Planned and Unplanned Tests	412
10.1	Purpose	414
10.2	Introduction	414
10.3	<i>A priori</i> versus <i>post hoc</i> tests	415
10.4	Per-comparison versus familywise error rates	417
10.5	Planned comparisons: <i>A priori</i> tests	419
10.6	Testing for polynomial trends	443
10.7	Unplanned comparisons: <i>Post hoc</i> tests	451
10.8	Nonparametric follow-up comparisons	457
10.9	Chapter summary	462
10.10	Recommended readings	463
10.11	Chapter review questions	463
Part III: Analysing Complex Designs		467
11	Testing for Differences: ANOVA and Factorial Designs	468
11.1	Purpose	470
11.2	Introduction	470

11.3	Reviewing the independent-samples ANOVA	471
11.4	The logic of the factorial design: Two between-subjects independent variables	472
11.5	Main and simple effects	478
11.6	Two between-subjects factorial ANOVA with SPSS	480
11.7	Fixed versus random factors	488
11.8	The split-plot or mixed-design ANOVA	490
11.9	Analysing a mixed-design ANOVA with SPSS	494
11.10	Nonparametric alternatives	506
11.11	Chapter summary	506
11.12	Recommended readings	507
11.13	Chapter review questions	508
12	Multiple Regression	512
12.1	Purpose	514
12.2	Introduction	514
12.3	Regression revisited	516
12.4	Introducing a second predictor	520
12.5	A detailed example	534
12.6	Issues concerning normality	536
12.7	Missing data	538
12.8	Testing for linearity and homoscedasticity	545
12.9	A multiple regression: The first pass	546
12.10	Addressing multicollinearity	550
12.11	Interactions	561
12.12	What can go wrong?	566
12.13	Chapter summary	567
12.14	Recommended readings	568
12.15	Chapter review questions	568
13	Factor Analysis	572
13.1	Purpose	574
13.2	Introduction	574
13.3	What is factor analysis?	575
13.4	Correlation coefficients revisited	577
13.5	The correlation matrix and PCA	579
13.6	The component matrix	581
13.7	The rotated component matrix	584
13.8	A detailed example	585
13.9	Choosing a method of rotation	607
13.10	Sample size requirements	608
13.11	Hierarchical multiple factor analysis	609
13.12	The effects of variable selection	610

13.13 Chapter summary	612
13.14 Recommended readings	613
13.15 Chapter review questions	613
Appendices	616
Appendix A Standard normal distribution and probabilities (z-scores)	616
Appendix B Cohen's effect size and sample size tables	618
Appendix C Critical values of the χ^2 distribution	620
Appendix D Critical values of t for two-tailed tests	620
Appendix E Critical values of F_{\max} for Hartley's homogeneity of variance test	621
Appendix F Critical values of the Mann–Whitney U -test	622
Appendix G Critical values of the F -distribution	623
Appendix H Critical values of the Studentized range statistic	626
The core story told through formulae	627
References	630
