Foreword.....	vii
Preface	ix
Acknowledgments.....	xiii
Author.....	xv

SECTION I FINANCIAL MARKET AND FINANCIAL THEORY

1 Financial Market Overview.....	3
1.1 R for Quantification.....	3
1.2 How Algorithms Change Fate.....	14
1.3 FinTech, the Booming Sector in Finance Field.....	20
1.4 Quantitative Investment Tools in China.....	25
1.5 Low-Risk Trading Strategy in China.....	39
2 Financial Theory.....	51
2.1 R Interpretation of Capital Asset Pricing Model (CAPM).....	51
2.2 R Interpretation of Simple Linear Regression Model.....	66
2.3 R Interpretation of Multiple Linear Regression Model.....	79
2.4 R Interpretation of Autoregression Model.....	91

SECTION II DATA PROCESSING AND HIGH PERFORMANCE COMPUTING OF R

3 Data Processing of R.....	103
3.1 Family of apply Functions.....	103
3.2 Ultra-High Performance Data Processing Package: data.table.....	117
3.3 Efficient Pipe Operation of R: magrittr.....	132
3.4 String Processing Package of R: stringr.....	140
3.5 Chinese Words Segmentation Package of R: jiebaR.....	157
4 High Performance Computing of R.....	171
4.1 OpenBlas Speeds Up Matrix Calculation of R.....	171
4.2 R Calls C++ across Boundary.....	179
4.3 When R Meets Docker.....	194

SECTION III FINANCIAL STRATEGY PRACTICE

5	Bonds and Repurchase	205
5.1	Treasury Bonds.....	205
5.2	Enterprise Bonds and the Arbitrage.....	215
5.3	Convertible Bonds Arbitrage Practice.....	227
5.4	Reverse Repurchase with Risk-Free Financial Instruments.....	244
6	Quantitative Investment Strategy Cases	255
6.1	Mean Reversion, the Investment Opportunity against Market.....	255
6.2	Build Quantitative Trading Model of Upswing Buying and Downswing Selling with R.....	276
6.3	Build Quantitative Model of Pairs Trading with R.....	294
6.4	Fund Accounting System Design and Implementation.....	308
6.5	Data Interpretation of Machine Gene Investment	332
	Epilogue	349
	Appendix: Docker Installation in Ubuntu.....	351
	Index	361
