List of Figures	xv
Preface	xix
Notation	xxi
CHAPTER 1 ■ Building Blocks and Stochastic Differential Equation Models	1
1.1 BROWNIAN MOTION AND POISSON PROCESSES	1
1.1.1 Gaussian Random Variables	2
1.1.2 Brownian Motion	2
1.1.3 Poisson Random Variables	4
1.1.4 Poisson Processes	5
1.1.5 Increments of Brownian Motion and Poisson Processes	6
1.1.5.1 Brownian Motion Increment	6
1.1.5.2 Poisson Process Increment	7
1.2 STOCHASTIC DIFFERENTIAL EQUATIONS	8
1.2.1 The Differential	8
1.2.1.1 The Problem with Jumps	8
1.2.1.2 Altering the Differential for Jumps	9
1.2.2 Compound Poisson Process	10
1.2.3 Ito Stochastic Differential Equations	11
1.2.3.1 Instantaneous Statistics	11
1.2.4 Poisson Driven Differential Equations	12
1.3 SUMMARY	14
CHAPTER 2 ■ Ito's Lemma	19
2.1 CHAIN RULE OF ORDINARY CALCULUS	19
2.1.1 Multivariable Taylor Series Expansions	20
2.2 ITO'S LEMMA FOR BROWNIAN MOTION	21
2.2.1 Replacing dz^2 by dt	22

2.2.1.1	Computing the Mean	22
2.2.1.2	Computing the Variance	23
2.2.2	Discussion of Ito's Lemma	24
2.3	ITO'S LEMMA FOR POISSON PROCESSES	24
2.3.1	Interpretation of Ito's Lemma for Poisson	26
2.4	MORE VERSIONS OF ITO'S LEMMA	26
2.4.1	Ito's Lemma for Compound Poisson Processes	26
2.4.2	Ito's Lemma for Brownian and Compound Poisson	26
2.4.3	Ito's Lemma for Vector Processes	27
2.5	ITO'S LEMMA, THE PRODUCT RULE, AND A RECTANGLE	28
2.6	SUMMARY	30
CHAPTER 3 ■ Stochastic Differential Equations		33
3.1	GEOMETRIC BROWNIAN MOTION	33
3.1.1	Stock Price Interpretation	34
3.2	GEOMETRIC POISSON MOTION	35
3.2.1	Conditional Lognormal Version	35
3.3	JUMP DIFFUSION MODEL	36
3.3.1	Jump Diffusion as a Stock Price Model	37
3.4	A MORE GENERAL STOCHASTIC DIFFERENTIAL EQUATION	37
3.4.1	Ornstein-Uhlenbeck Process and Mean Reversion	38
3.5	COX-INGERSOLL-ROSS PROCESS	39
3.6	SUMMARY	42
CHAPTER 4 ■ The Factor Model Approach to Arbitrage Pricing		45
4.1	RETURNS AND FACTOR MODELS	45
4.1.1	Returns from Price Changes	45
4.1.2	Stochastic Differential Equations and Factor Models	46
4.2	FACTOR APPROACH TO ARBITRAGE USING RETURNS	47
4.2.1	Arbitrage	49
4.2.2	Null and Range Space Relationship	50
4.2.3	A Useful Absence of Arbitrage Condition	51
4.2.4	Interpretations	52
4.2.4.1	Market Price of Risk	52
4.2.4.2	Market Price of Time	52
4.2.5	A Problem with Returns	53
4.3	FACTOR APPROACH USING PRICES AND VALUE CHANGES	53

4.3.1	Prices, Value Changes, and Arbitrage	53
4.3.2	Profit/Loss and Arbitrage	55
4.4	TWO STANDARD EXAMPLES	56
4.4.1	A Stock under Geometric Brownian Motion	56
4.4.1.1	Using the Return APT	56
4.4.1.2	Using the Price APT	57
4.4.2	Futures Contracts	57
4.5	SUMMARY	59
CHAPTER 5 ■ Constructing a Factor Model Pricing Framework		63
5.1	CLASSIFICATION OF QUANTITIES	63
5.1.1	Factors	64
5.1.2	Underlying Variables	64
5.1.3	Tradables	64
5.1.4	Importance of Tradables	64
5.2	DERIVATIVES	65
5.2.1	Examples of Derivatives	66
5.3	FACTOR MODELS FOR UNDERLYING VARIABLES AND TRADABLES	67
5.3.1	Direct Factor Models	67
5.3.2	Factor Models via Ito's Lemma	68
5.4	TRADABLE TABLES	69
5.4.1	Structure of a Tradable Table	69
5.5	APPLYING THE PRICE APT	70
5.5.1	Relative Pricing and Marketed Tradables	71
5.5.2	Pricing the Derivative	72
5.6	UNDERDETERMINED AND OVERDETERMINED SYSTEMS	74
5.6.1	Underdetermined and Incompleteness	74
5.6.2	Overdetermined and Calibration	75
5.7	THREE STEP PROCEDURE	76
5.8	SOLVING THE PRICE APT EQUATION FOR A SPECIFIC DERIVATIVE	76
5.9	SUMMARY	78
CHAPTER 6 ■ Equity Derivatives		83
6.1	BLACK-SCHOLES MODEL	83
6.1.1	Solution for European Call and Put Options	86
6.1.2	Implied Volatility	89
6.2	CONTINUOUS DIVIDENDS	90

6.2.1	European Calls and Puts under Continuous Dividends	92
6.2.2	What Pays a Continuous Dividend?	94
6.3	CASH DIVIDENDS	94
6.3.1	European Calls and Puts under Cash Dividends	96
6.4	POISSON PROCESSES	97
6.4.1	Closed Form Solution for European Call Option	99
6.5	OPTIONS ON FUTURES	99
6.5.1	Solution for European Call and Put Options	101
6.6	JUMP DIFFUSION MODEL	102
6.6.1	Bankruptcy!	105
6.6.2	Lognormal Jumps	105
6.7	EXCHANGE ONE ASSET FOR ANOTHER	108
6.7.1	Closed Form Solution	109
6.7.2	Using a Different Currency (Change of Numeraire)	110
6.7.3	Recovering the Closed Form Solution	112
6.8	STOCHASTIC VOLATILITY	114
6.9	SUMMARY	115
CHAPTER 7 ■ Interest Rate and Credit Derivatives		119
7.1	INTEREST RATE MODELING AND DERIVATIVES	119
7.2	MODELING THE TERM STRUCTURE OF INTEREST RATES	120
7.2.1	Spot Rates	120
7.2.2	Zero-Coupon Bonds	121
7.2.3	Forward Rates	122
7.2.4	Discount Factors	123
7.2.5	Instantaneous Rates	126
7.2.6	Two Choices for Underlying Variables	126
7.3	MODELS BASED ON THE SHORT RATE	127
7.3.1	The Short Rate of Interest and a Money Market Account	127
7.3.2	Single Factor Short Rate Models	128
7.3.2.1	Vasicek Model	130
7.3.2.2	Cox–Ingersoll–Ross Model	133
7.3.2.3	Additional Single Factor Short Rate Models	134
7.3.3	Multifactor Short Rate Models	134
7.4	MODELS BASED ON FORWARD RATES	136
7.4.1	An Important Detour on Forwards	136

7.4.1.1	Market Price of Risk for Forwards	137
7.4.1.2	Pricing Options on Forwards	140
7.4.1.3	Simplified Pricing in Units of the Bond	141
7.5	LIBOR MARKET MODEL	144
7.5.1	Discount Factors are Forward Prices	144
7.5.2	LMM with Discount Factors as Underlying Variables	145
7.5.2.1	Calibration of the Market Prices of Risk	147
7.5.2.2	Using the Forward Analogy	147
7.5.2.3	Formal Three Step Approach	148
7.5.3	Forward Rates as Underlying Variables	151
7.5.4	Pricing a Caplet in the Right Units	155
7.5.4.1	LMM Caplet Formula	158
7.5.4.2	From Caplets to Floorlets and Beyond	159
7.6	HEATH–JARROW–MORTON MODEL	160
7.7	CREDIT DERIVATIVES	162
7.7.1	Defaultable Bonds	162
7.7.1.1	Different Types of Recovery	164
7.7.2	Defaultable Bonds with Random Intensity of Default	166
7.8	SUMMARY	168
7.9	APPENDIX: HEATH–JARROW–MORTON DERIVATION	168
CHAPTER 8 ■ Hedging		177
8.1	HEDGING FROM A FACTOR PERSPECTIVE	177
8.1.1	Description Using a Tradable Table	178
8.1.2	Relationship between Hedging and Arbitrage	179
8.1.2.1	Creating a No-Cost Hedge	179
8.1.2.2	Simple Explanation	180
8.1.3	Hedging Examples	181
8.1.3.1	Hedging in Black–Scholes	181
8.1.3.2	Pricing from the Black–Scholes Hedge	181
8.1.3.3	Hedging in Bonds	182
8.1.3.4	Pricing from the Bond Hedge	185
8.1.4	Hedging under Incompleteness	186
8.1.5	A Question of Consistency	188
8.2	HEDGING FROM AN UNDERLYING VARIABLE PERSPECTIVE	189
8.2.1	Black–Scholes Hedging	189

8.2.2	Hedging Bonds	190
8.2.3	Derivatives Imply Small Changes	190
8.3	HIGHER ORDER APPROXIMATIONS	192
8.3.1	The Greeks	192
8.3.2	Delta–Gamma Hedge	194
8.3.3	Determining What the Error Looks Like	196
8.4	SUMMARY	198
CHAPTER 9 ■ Computation of Solutions		201
9.1	DISCRETIZING THE MODELING PARADIGM	201
9.1.1	Discretizing Factor Models	202
9.1.2	Discretizing Geometric Brownian Motion	203
9.1.2.1	Direct Discretization of the Factor Model	203
9.1.2.2	Discretizing the Exact Solution	203
9.1.3	More General Modeling Induced by Binary Factor	204
9.1.4	From the Binary Model to a Factor Model	204
9.1.4.1	Note on Time Scaling of the Factor	205
9.2	THREE STEP PROCEDURE UNDER BINARY MODELING	206
9.2.1	Single Step Calibration Equation	207
9.2.2	Single Step Pricing Equation	207
9.2.2.1	Interpreting the Pricing Equation	208
9.2.3	Risk Neutral Parameterization	209
9.3	FINAL STEP: PRICING ON MULTISTEP BINOMIAL TREES	210
9.3.1	Collapsing Trees to Recombining Lattices	212
9.4	PRICING OPTIONS ON A STOCK LATTICE	213
9.4.1	Modeling the Stock	214
9.4.2	Calibration Using Marketed Tradables	215
9.4.3	Pricing a European Call Using the Calibrated Lattice	216
9.4.4	Pricing American Options	217
9.5	PRICING ON A CIR SHORT RATE TREE	218
9.5.1	Modeling and Classification of Discretized Variables	219
9.5.2	Representation of Marketed Tradables	220
9.5.3	Calibration Using Marketed Tradables	222
9.5.4	Market Price of Risk Calibration Algorithm	223
9.5.5	Pricing Derivatives on CIR Calibrated Trees	224
9.6	SINGLE FACTOR LIBOR MARKET MODEL	226

9.6.1	LMM Forward Rates and Calibration	227
9.6.2	Modeling and Classification of Discretized Variables	227
9.6.3	Specification of Bond Prices and Forward Rates	228
9.6.4	Calibration Using Marketed Tradables	229
9.6.5	Calibration Equation for the Forward Rate Parameters	231
9.6.5.1	Solving for $a_n(i)$	232
9.6.6	Calibration Algorithm for LMM	233
9.6.7	Pricing Derivatives with LMM Calibrated Trees	234
9.7	ADDITIONAL COMPUTATIONAL METHODS	236
9.8	SUMMARY	237
CHAPTER 10 ■ The Road to Risk Neutrality		241
10.1	DO THE FACTORS MATTER?	241
10.1.1	Brownian Factors	242
10.1.1.1	Adding a Drift Works	243
10.1.1.2	Changing the Variance Does Not Work	243
10.1.2	Poisson Factors	244
10.1.2.1	Changing the Intensity Works	245
10.1.2.2	Adding a Drift Does Not Work	245
10.2	RISK NEUTRAL REPRESENTATIONS	246
10.2.1	Risk Neutrality under Brownian Factors	246
10.2.2	Market Price of Risk Interpretation	247
10.2.3	Risk Neutrality under Poisson Factors	248
10.2.4	Market Price of Risk under Poisson Factors	250
10.3	PRICING AS AN EXPECTATION	250
10.4	APPLICATIONS OF RISK NEUTRAL PRICING	251
10.4.1	How to Apply Risk Neutral Pricing	251
10.4.2	Black–Scholes	253
10.4.3	Poisson Model	255
10.4.4	Vasicek Single Factor Short Rate Model	256
10.4.5	Heath–Jarrow–Morton Calibration	258
10.5	SUMMARY	261
	Bibliography	263
	Index	267
