

Contents

<i>Preface</i>	v
Chapter 1. Introduction	1
Chapter 2. All the Financial Math You Need to Survive with Interesting Applications	5
2.1 Introduction	5
2.2 Probability Space	5
2.2.1 Probability Measure and Random Variables	8
2.2.2 The Information Flow Through Time: The Role of the Filtration	11
2.3 How to Estimate a Random Variable — Expectations and Conditioning	13
2.4 Main Features of Probability Measure	19
2.5 Moments and Cumulants	21
2.6 Statistical Estimators	24
2.7 Probability Density Functions	25
2.7.1 Uniform Distribution	26
2.7.2 Bernoulli and Binomial Distributions	27
2.7.3 Normal Distribution	28

2.7.4	Empirical Distribution	28
2.7.5	Exponential Distribution and Student's t-Distribution	33
2.8	Central Limit Theorem	34
2.9	Stochastic Processes	37
2.10	Brownian Motion	39
2.11	Quadratic Variation	42
2.12	Martingale	43
2.13	Stochastic Differential Equations (SDEs)	44
2.14	Itô's Lemma	47
2.15	Some Very Useful Theorems	50
2.15.1	Martingale Representation Theorem	50
2.15.2	Feynman-Kac Theorem	52
2.15.3	Radon-Nikodym Theorem	53
2.15.4	Girsanov's Theorem	55
Chapter 3.	The Pricing of Financial Derivatives — The Replica Approach	59
3.1	Introduction — The Pricing of Financial Derivatives	59
3.2	What Kind of Model are We Looking For?	60
3.2.1	Coherence of the Pricing Methodology	61
3.2.2	Hedging Strategies	63
3.3	Are We Able to do the Same? Replica Pricing	63
3.3.1	Bank Account	66
3.3.2	Self-Financing Strategies	70
3.3.3	Arbitrage	72
3.3.4	Replica Examples	74
3.3.4.1	Zero Coupon Bond	75
3.3.4.2	Depo Rates	77
3.3.4.3	Forward	77
3.3.4.4	Forward Rate Agreement	79
3.4	Derivatives: Call, Put and Digital Options	82
Chapter 4.	Risk-Neutral Pricing	87
4.1	Introduction	87

4.1.1	Setting the Stage	89
4.1.2	Point One: Modeling the Underlying	91
4.1.3	Point Two: Guess a Pricing Formula	92
4.1.4	Point Three: Finding an Equivalent Martingale Measure	94
4.1.5	Point Four: Defining the Replica Strategy	96
4.1.6	Point Five: The Pricing Algorithm	98
Chapter 5.	The Black and Scholes Framework and Its Extensions	101
5.1	Black–Scholes Model — Part I	101
5.2	BS Model — Part II — Girsanov is Back	106
5.3	Put–Call Parity	107
5.4	Implied Volatility and the Calibration Problem	109
5.5	Digital Options	115
5.6	Change of Numeraire	118
5.6.1	The Forward Measure	122
5.7	Greeks	124
5.8	Heston Model	130
5.8.1	Incomplete Markets	130
5.8.2	Heston Model Equations	131
5.8.3	Heston Risk Neutral Model	132
5.8.4	Heston Pricing Formula	134
5.8.5	Heston Implied Volatility	136
Chapter 6.	Risk Modeling	139
6.1	Introduction	139
6.2	Risk? What is Risk?	140
6.3	What Kind of Model are You Looking For?	140
6.4	Risk Measures: Value-at-Risk and Expected Shortfall	142
6.4.1	Some Caveats on VaR Estimation	146
6.4.1.1	Percentile Estimation	147
6.4.1.2	VaR Statistical Error	155

6.5	Real-World Measure	156
6.6	Market Risk Estimation	158
6.6.1	Historical Method	163
6.6.2	Parametric Method	166
6.6.3	Monte Carlo Method	171
6.7	Does it Really Work? The Backtesting Approach	172
6.8	From Theory to Practice	177
Chapter 7.	The New Post-Crisis Paradigms	181
7.1	The Financial World After Financial Crisis	181
7.2	Multi-Curve Framework	183
7.3	Fair Value Adjustments	187
7.3.1	Credit Value Adjustment	187
7.4	Counterparty Credit Risk	192
Appendix		199
A.1	Black-Scholes Pricing Formula Derivation — Risk-Neutral Approach	199
A.2	Delta Formula for Call Options	202
A.3	Heston Model Pricing Formula Derivation	203
<i>Bibliography</i>		207
<i>Index</i>		211
